

Data Analytics

We refer it as a process of collecting, cleaning, analyzing data to make it more efficient to make decisions.

Tools used

The most used tools are MS Excel, SQL, Python, Power BI.

Steps ;

- Collection of data
- Data cleaning
- Analyzing data
- Visualizing
- Interpreting

Collection of data: collection of raw data of the company, firm, etc.

Data cleaning: Making the data more likely to understand by exploring and cleaning the data set given.

Analyzing: Analyze the cleaned data set to make sure no errors are found.

Visualizing : If there is something to make like an extra editing to the cleaned data like adding and deleting the items.

Interpreting: decision making by the data set we made.
